

Experiment

Design a smartphone controlled device

Circuit diagram:

Theory

CONCEPT USED:

1. By using kirchoff's voltage law
2. &
3. By using kirchoff's current law
4. Wireless technology
5. Bluetooth interfacing

LEARNING AND OBSERVATIONS:

1. Connections in Breadboard and wiring.
2. How to control arduino and its coding.
3. Use of multimeter for continuity.
4. Proper use of bluetooth

OBSERVATION:

1. Controlling of devices through a remote
2. Relation between software and hardware.
3. Variation of frequency

PROBLEMS & TROUBLESHOOTING:

1. To select the right port and type of arduino
2. To check the loose connections
3. To check the connections according to the codes
4. To check the continuity of the circuit
5. To check the flow of current in the circuit
6. Errors in code
7. Setting up right connections
8. Display in proper order
9. Pinmodes of devices

PRECAUTIONS:

1. Do not connect arduino till the circuit is complete
2. Do not connect leds without a variable resistor
3. Proper Bluetooth module

OUTCOMES:

1. Making of wireless controlled devices by bluetooth module.
2. Proper use of Arduino and breadboard
